LETTER NO.

TO : Director, NPIC

FROM: C/Support Staff

ATTN:

1. The attached memorandum is for your information. It contains two points:

(a) It now appears that the physical aspects--weight, height, vibration--of the High Precision Stereo Comparator dictate that the instrument be located on the first floor. It was originally scheduled for location in TID's area on the second floor.

(b) A second set of vibration tests has brought about a redesign of the isolation mounts and the main frame support for the instrument. The contract for this instrument is a cost-type contract (like the contract for the Automatic Stereo Scanning Program [] which we just reviewed). The cost to the Company to redesign the isolation mounts and main frame support is a cost which they can legitimately add to the contract. At the present, it appears that this added cost will not result in an overrun.

25X1

2. TDS, TID and SS personnel are working together on the relocation problem. A recommendation as to the specific location on the first floor
